

What is Auto Mist?

Auto Mist is an *automatic* insect control system installed in areas where insects are a nuisance. Auto Mist systems help to provide an atmosphere where outdoor living can be enjoyed.

Enjoy

your
backyard!

*Tired of battling mosquitoes with citronella candles,
spray repellents, and bug zappers?
Relief is only an Auto Mist system away!*

Auto Mist

Insect Control System

Control mosquitoes
& other insects
automatically
with Auto Mist

How does the System Work?

The Auto Mist system includes nozzles, tubing, and a reservoir with a pressurized pump. Spray nozzles, connected by nylon tubing, are placed at strategic locations based on landscaping and the structure of the home to create a zone of protection. The nozzles and tubing are connected to a pressurized pumping system that is controlled by an automatic timer.

Once installed, the system is set to spray on a predetermined 24-hour schedule. The pump draws liquid from a reservoir and transfers it through the nylon tubing to the spray nozzles. Auto Mist covers the area with small particles of water-based insecticide. Using this technology, the system controls insects by killing a large number of insects and lowering the reproduction cycle.

Some mosquitoes are capable of transmitting diseases such as malaria, yellow fever, and the West Nile Virus.

Nozzles (right) are placed at strategic locations based on landscaping and the structure of the home. The nozzles are connected to the pump/reservoir system (below).

Why use Auto Mist?

Insect control has been a headache for homeowners for decades. Control methods range from bug zappers to citronella candles to repellents. Many of these methods do not provide longlasting effectiveness and require intensive labor and time out of a busy schedule.

The Auto Mist system kills mosquitoes, flies, gnats, and no-see-ums.

Auto Mist will save you time and labor, is harmless around children and pets,

and eliminates irritating insects. The system is controlled by an automatic timer that results in no additional labor. Water-based, EPA registered insecticides are used and provide fast knockdown of mosquitoes, flies, gnats, and no-see-ums, without causing harm to humans, pets, and other insects.
